Auracelle **Charlie v6.0**

AI Governance Wargame Simulation · SB-53 Stress-Test · Whistleblower Protections

Scenario: **Frontier AI** Use-Case: **Whistleblower Protections** Regime: **Adversarial** Rounds: **6 (Governance Arc)**

What you are doing — in plain language

You are going to stress-test **California Senate Bill 53** — the first enforceable AI safety law in the United States.

This session focuses on one specific provision: **the whistleblower protection clause**. SB-53 requires covered AI developers to establish anti-retaliation protections and anonymous reporting channels for employees who identify safety concerns.

Five AI agents negotiate this provision under adversarial conditions. Your job is to guide and record their moves. **No prior knowledge of AI law is required.**

What is at stake — the whistleblower question

Every actor in this simulation has a different stake in whether the whistleblower provision survives:

Actor	Their stake in the whistleblower clause
State / Government Actors	Must decide whether federal preemption nullifies California whistleblower protections. A federal preemption bill creates a direct conflict.
Civil Society Actors	Treat the whistleblower clause as a non-negotiable red line. Any weakening of anonymous reporting channels will be actively opposed.
Industry Actors	Will seek to narrow "protected disclosure" to exclude competitive intelligence and commercially sensitive safety data.
EU / International Teams	Push for alignment with EU Whistleblower Directive (2019/1937). Mutual recognition only if SB-53 meets the EU baseline.
Academic / Technical Actors	Question whether the anonymous reporting channel can be technically secured. Propose independent third-party channel operators.

Step-by-step instructions

1

Open the portal and log in

Open [Auracelle_Charlie_Portalv5.html](#) in **Chrome or Firefox only**.

- **Your name:** As on your registration form
- **Organisation:** Your institution or employer
- **Access code:** **CHARLIE2026**

Select your **Sector** and **Gender Composition** to match your registration. These are the primary independent variables recorded with every move.

2**Watch the guided demo (10–15 minutes)**

Click **Watch the Demo** on the welcome page. The demo walks all eleven Charlie tabs automatically.

- **Tab ① Session Design:** Watch the session being configured. The whistleblower use-case is pre-selected.
- **Tab ② Facilitator Mode:** Watch all six rounds. See the Actor Guidance panel. Watch the Red Team shock fire at Round 4.

No clicks required. Just watch.

3**Configure your session in Tab ① (3 minutes)**

When you click **Launch Auracelle Charlie**, you land on Tab ① Session Design. These fields are pre-configured — **do not change them:**

Field	Value	Why it is locked
Scenario Domain	Frontier AI — Catastrophic Risk	Contains the SB-53 policy domain
Validation Case	TFAIA — California SB-53 (2025)	The law being stress-tested
Use-Case Objective	Whistleblower Protections	Fixed for comparability across all participants
Information Regime	Adversarial — Contested	Maximises governance stress
Round Arc	Governance Negotiation (6 rounds)	Standard diplomatic cycle

⚠ **The one field you MUST set yourself**

Participant Composition Group — select the group matching your professional sector. This is the independent that determines your five negotiating actors.

Then click ► **Initialise Session**.

4**Play six rounds in Tab ② (40–50 minutes)**

You are now in Facilitator Mode. Each round follows this sequence:

- ① Policy Owner Agent fires. Read the challenge about the whistleblower provision.
- ② Actor Guidance panel updates ( above Log Move). Read the actor's position and suggested rationale. Use it or write your own.
- ③ Select the Move Type. The guidance panel suggests one per round — you can override it.
- ④ Click ► Log Move. The form advances automatically to the next actor.
- ⑤ Repeat for all five actors. When all five are logged the Advance Round button pulses. Click it.

⚡ **Rounds 4 and 5 — Red Team shock events**

The Red Team Agent fires automatically at Round 4 (AI Incident Event) and Round 5 (Unilateral Withdrawal). A banner appears. These shocks directly test the whistleblower provision under crisis conditions. Continue logging as normal after the shock.

5**Export your session data (5 minutes)**

After Round 6 go to **Tab ⑥ After-Action Review**.

- **↓ Log JSON:** Primary research file. Contains every move, GWC trajectory, and RL reward values. Submit this.

- **↓ Log CSV:** Optional flat table for your own review.

Submit your JSON file within 24 hours.

Email to grace-alice.evans@bathspa.ac.uk — Subject: Charlie Pilot — [Your Name] — [Your Sector]. Without t your session cannot contribute to the research record.

Quick reference — move types

Move Type	When to use it	Effect on governance scores
PROPOSE	Tabling a new position or clause.	Raises NDM and ESI. Strong opening move.
COALITION	Formally joining another actor's position.	Raises NDM coalition sub-score. Best used Rounds 2–3.
COUNTER	Rejecting the proposal and offering an alternative.	Mixed: raises ESI but lowers NDM coalition score.
COMPLY	Accepting the framework as currently written.	Raises IIC and NDM. Strongest in Rounds 5–6.
ESCALATE	Invoking a red line or crisis framing.	Raises SRA but lowers coalition and legitimacy scores.
DEFECT	Withdrawing from the coalition.	Significantly lowers NDM and ASI. Use for shock rounds.

What your data measures

Every move you log is recorded with its governance domain, move type, actor, round, and a reward score. Across participants, this produces four research measurements:

KPI	What it measures	How the whistleblower focus produces the data
PSTOA Score	Policy stress-test outcome, 0–100.	Does the whistleblower provision survive six rounds? Score above 60 means the provision held.
Coalition Rate	% of actors maintaining support.	Do civil society actors hold the red line while industry actors seek to narrow the provision?
Shock Response	Policy shift after crisis events.	Does the AI incident or federal withdrawal cause actors to abandon the whistleblower clause?
Composition Effect	Difference in outcomes across groups.	Do Military groups score the whistleblower provision differently from Civil Society or Technical groups?

Session timing

Phase	Time	What happens
Login + Setup	5 min	Open portal, enter access code, select composition group, launch Charlie.
Guided Demo	10–15 min	Watch all eleven tabs. No clicks required.

Session Design	3 min	Confirm pre-configured settings. Select composition group. Initialise.
Six Rounds	40–50 min	Log all five actors per round. Red Team shocks fire at Rounds 4 and 5.
Export & Submit	5 min	Review PSTOA score. Export JSON. Email to PI within 24 hours.
Total	60–75 min	Complete autonomous session.
